

IOM registration/travel advisory app wireframes

## Welcome screen

### NOTES

- It can include logos of the Government, and IOM and/or MICIC if possible.

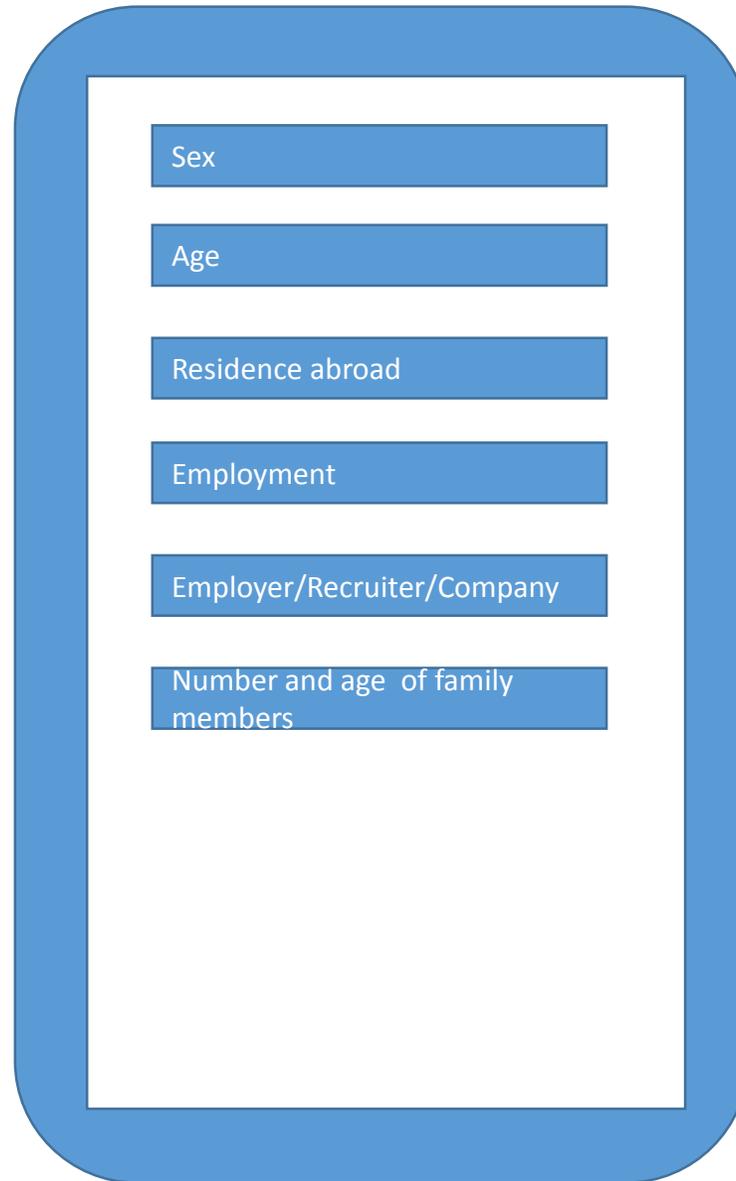

## Registration screen

The registration screen is enclosed in a blue rounded rectangle. It contains ten input fields, each represented by a blue rectangle with white text. The fields are arranged vertically and are: 'Your name', 'Phone number', 'Email', 'Preferred language', 'Emergency contact name', 'Relationship with you', 'Emergency contact number', and 'Emergency contact email'.

### NOTES

- It is possible not to require registration at all. This reduces the amount of information available on each individual, but may ensure that people use the app even if they don't want to register.
- Multilingual support is optional. It should be linked to the language in which information is issued/disseminated through the app.
- This information has to be stored securely. A disclaimer needs to be added regarding data collection and use.

## Personal data screen

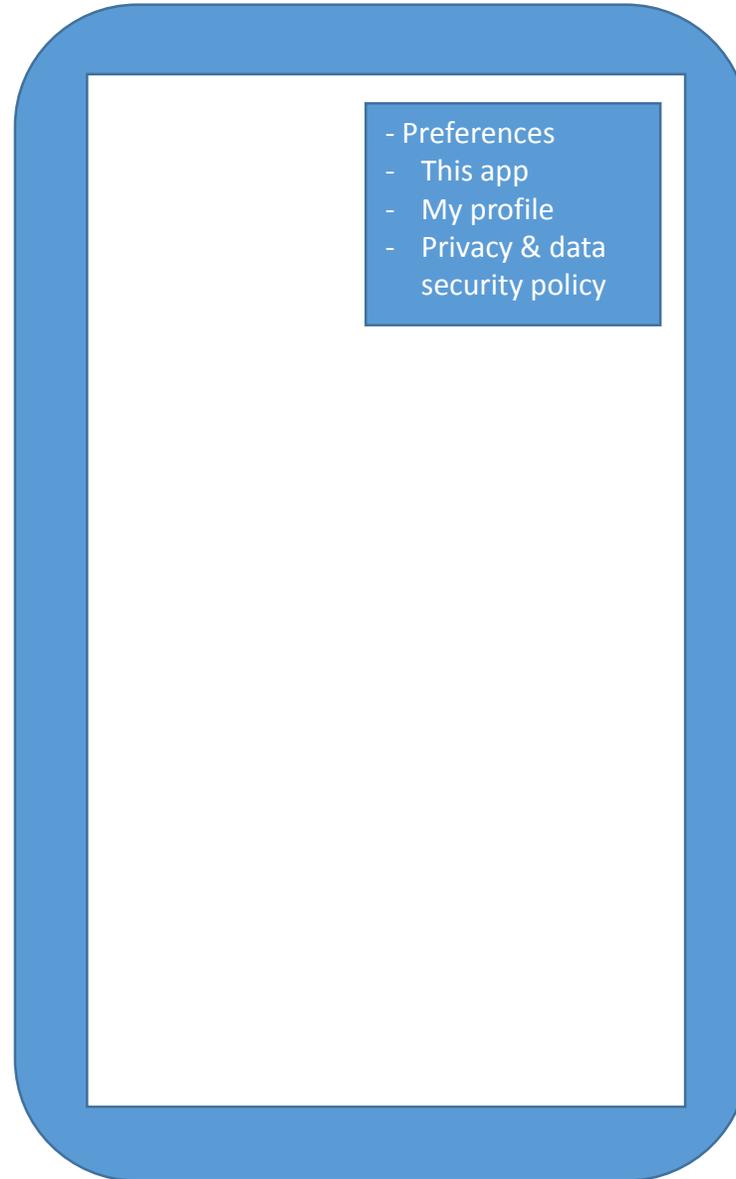

A diagram of a personal data screen, represented by a blue rounded rectangle. Inside, there are six horizontal blue input fields, each containing a label for a personal data field. The fields are stacked vertically and separated by small gaps.

- Sex
- Age
- Residence abroad
- Employment
- Employer/Recruiter/Company
- Number and age of family members

### NOTES

- Only if possible/needed, additional questions can be asked to complement the registration.

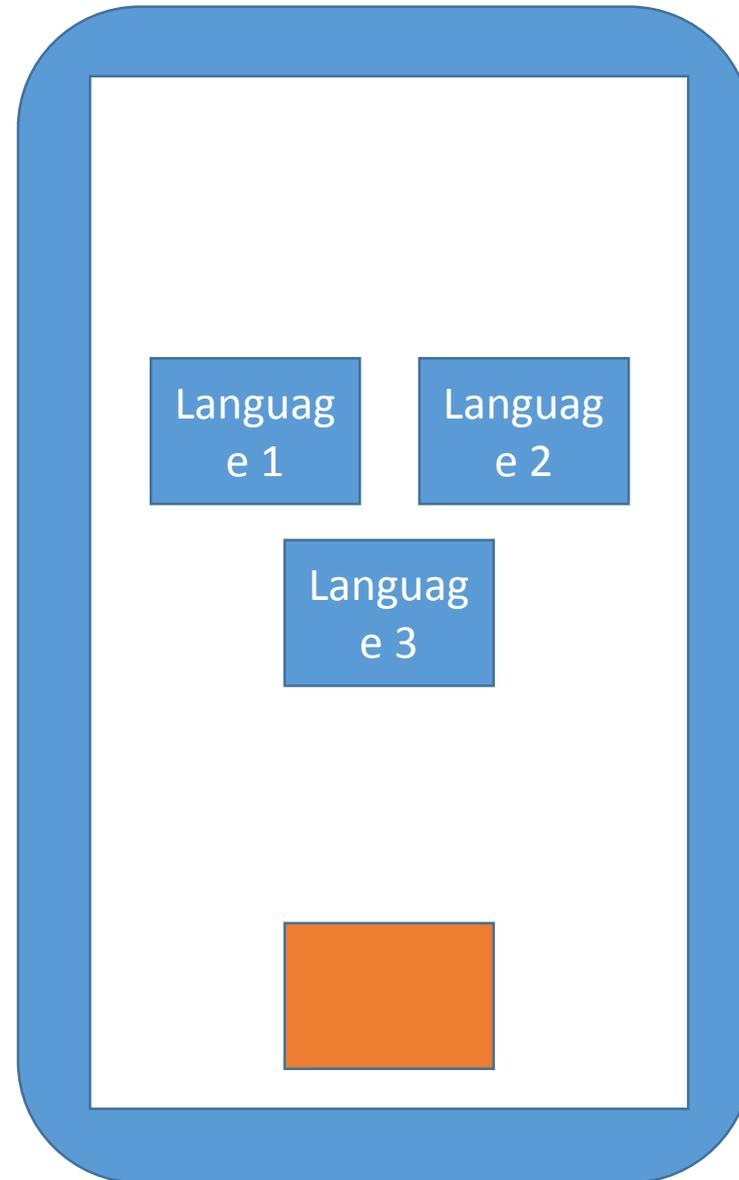

# Menu

**NOTES**

- Technical settings of the app
- Details about developer, funding, management
- Possibility to modify (or delete) personal data
- Details about data collection and use, and security – and relevant policies.

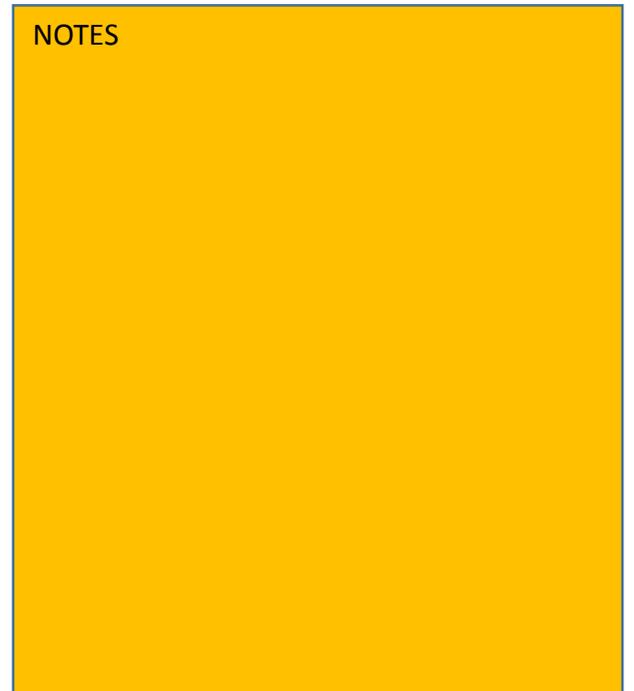

## Alternative welcome screen

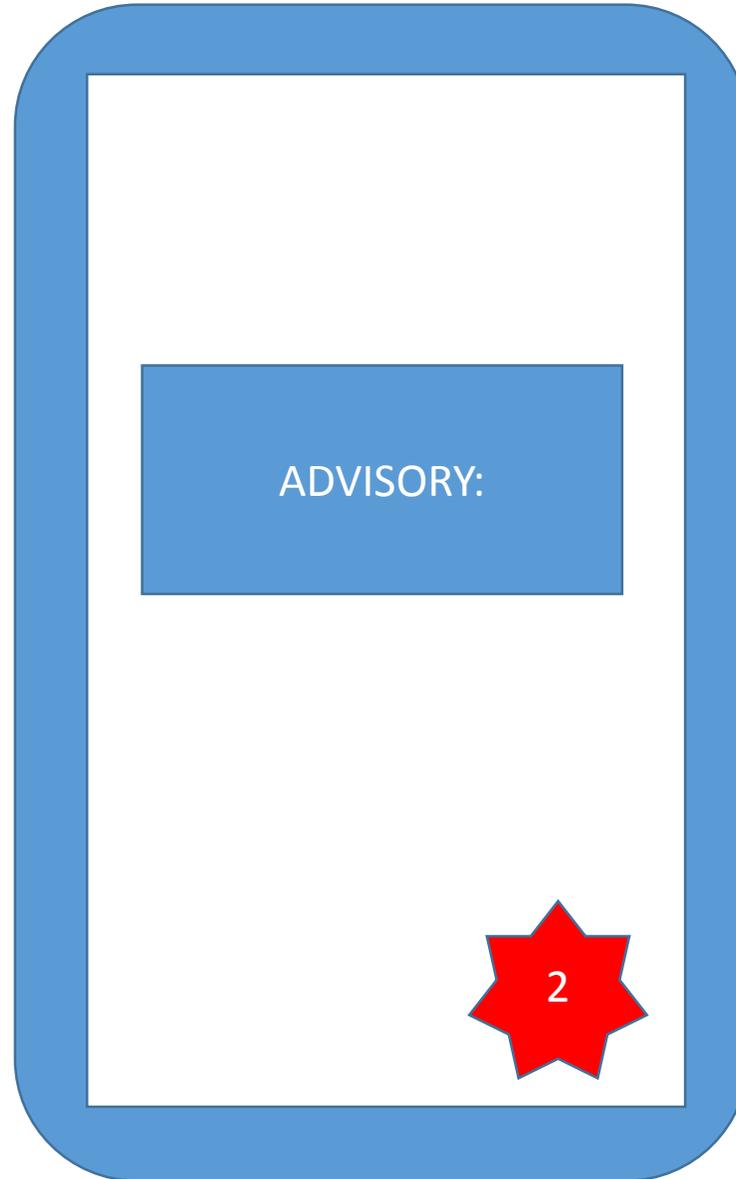

### NOTES

- In particular if registration is not required to use the app, the welcome screen can include a simple language selection function (if multilingual support is required).

## Hub screen

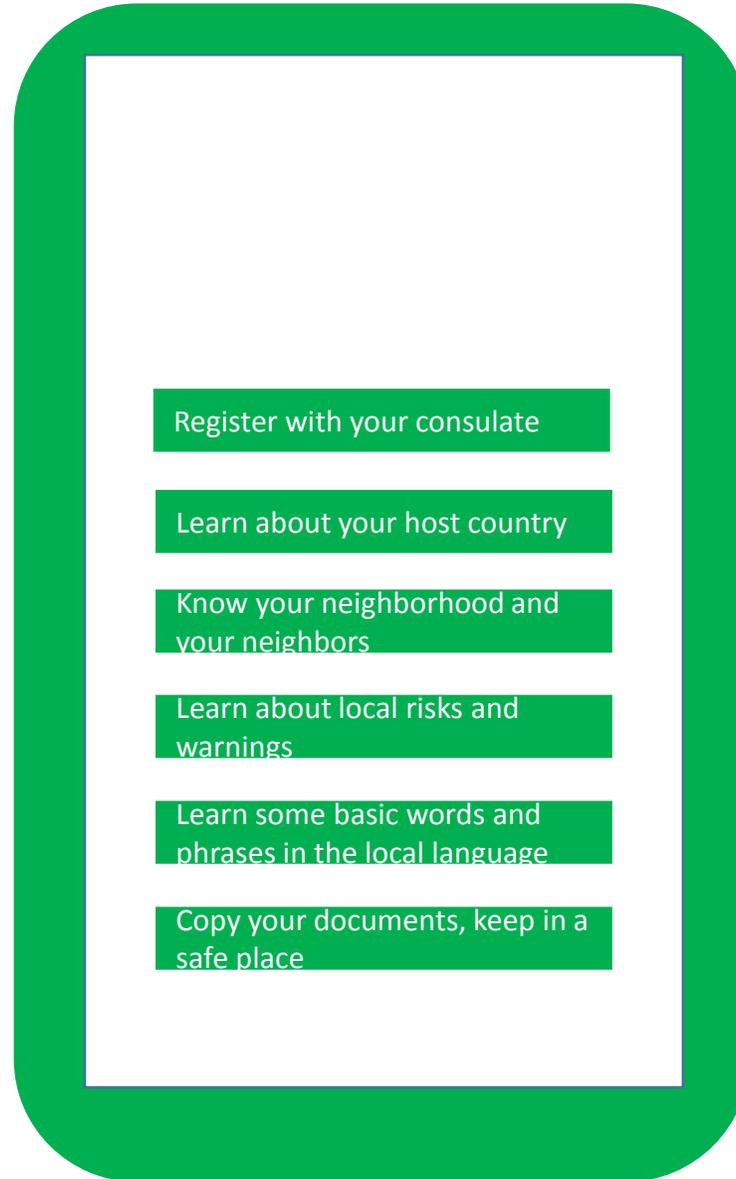

## Hub screen

### NOTES

- All screens include a badge for unread advisories;
- Unread advisories are also notified on top of other apps in the phone, and appear on the phone login screen.

## Generic travel advisory

### NOTES

- Non clickable list/infographic

## Going to a specific country

### NOTES

- Selecting information on a specific country (dropdown menu, list, flags) etc.
- The list of countries can be based on priorities defined in collaboration with the government, and only include significant countries of destination.

## Country specific information

Country name

Local country representations

Immigration, labour and other laws

Basic services

Visa requirements and how to apply

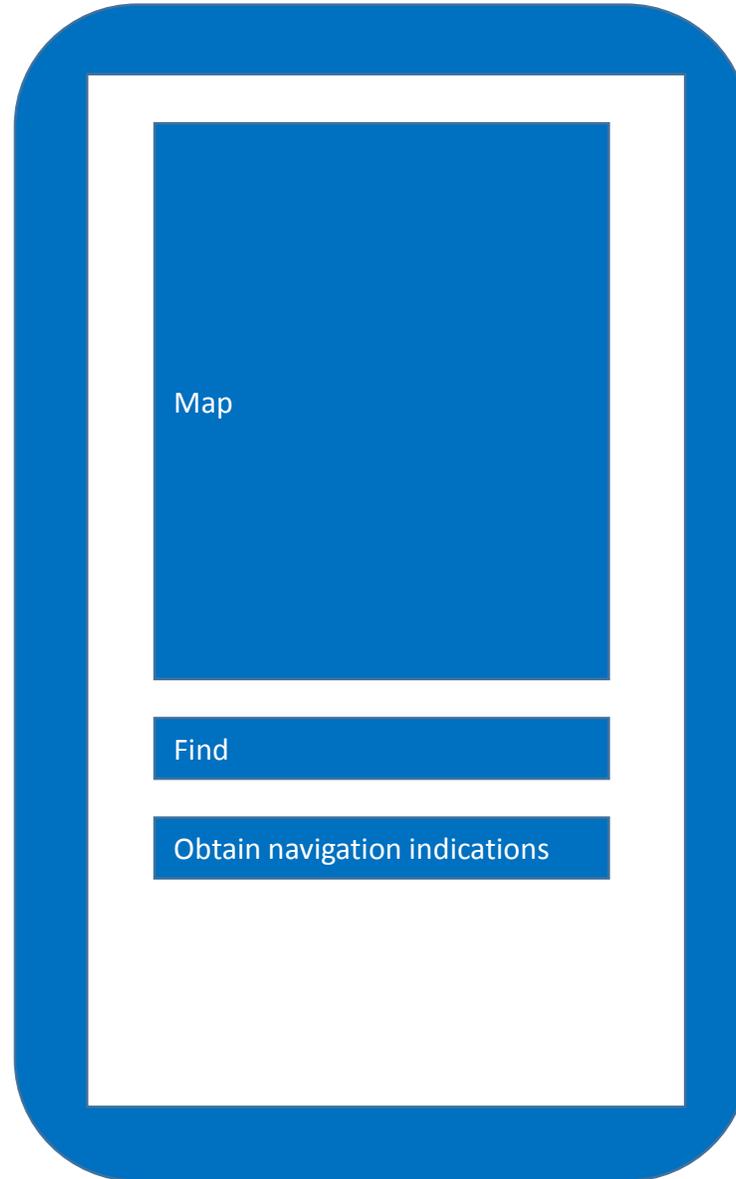

Emergency numbers

Active advisories

### NOTES

- Country-specific information
- Includes locations and contacts of embassies and consulates in the country, and what services they can provide.
- Relevant laws includes selected provisions on labour, access to health services, emergency assistance and other as needed, as per the host country's legal framework.
  - Ideally this should link to actual legal sources and summarize main provisions/implications of laws.
- Basic services includes relevant governmental and non-governmental institutions providing healthcare, employment opportunities, emergency and evacuation assistance and so on (also includes information on how to access assistance).
- Active advisories includes active emergency advisories for the specific country.
- The linked pages can be text only, or text with link if too much content.

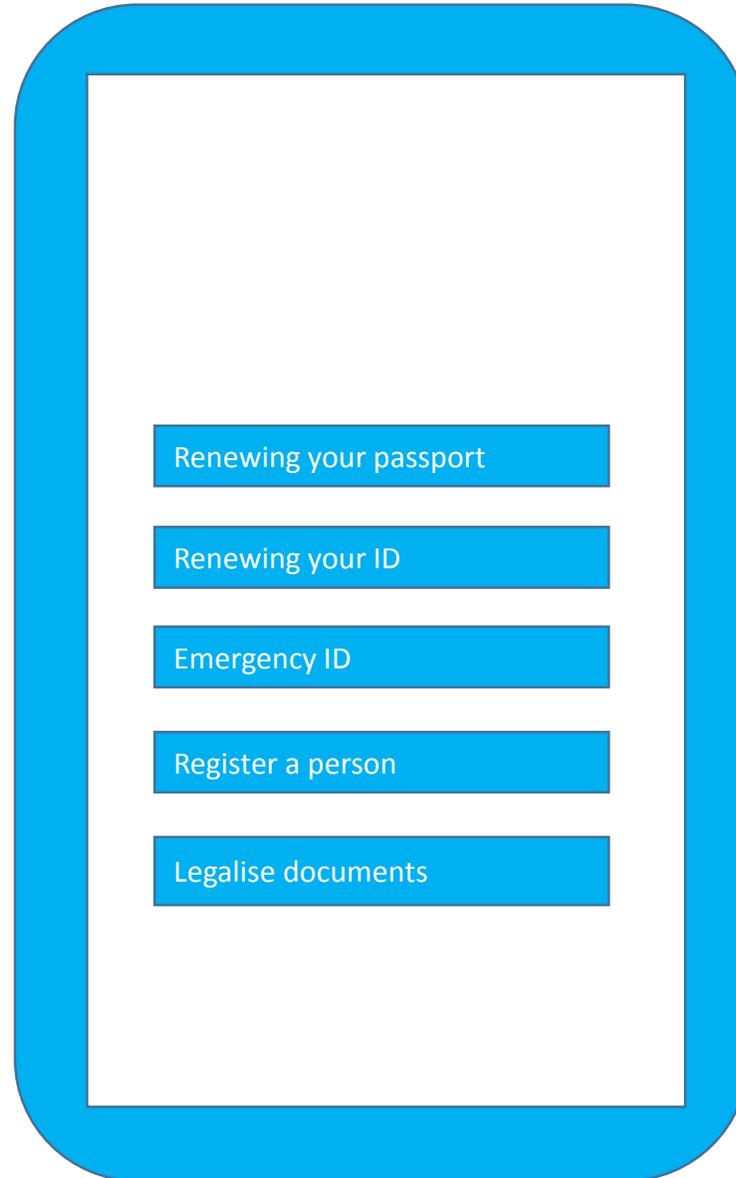

## Find the closest consulate

### NOTES

- The closest representation is shown on the map, based on the GPS coordinates of the phone.

## Consular services

### NOTES

- Linked text should include how-to information to apply/receive the different service.
- Also highlight if they cannot be provided in all posts.

## Communicating in emergencies

Name

Family name

Reason for communication

Assistance needed

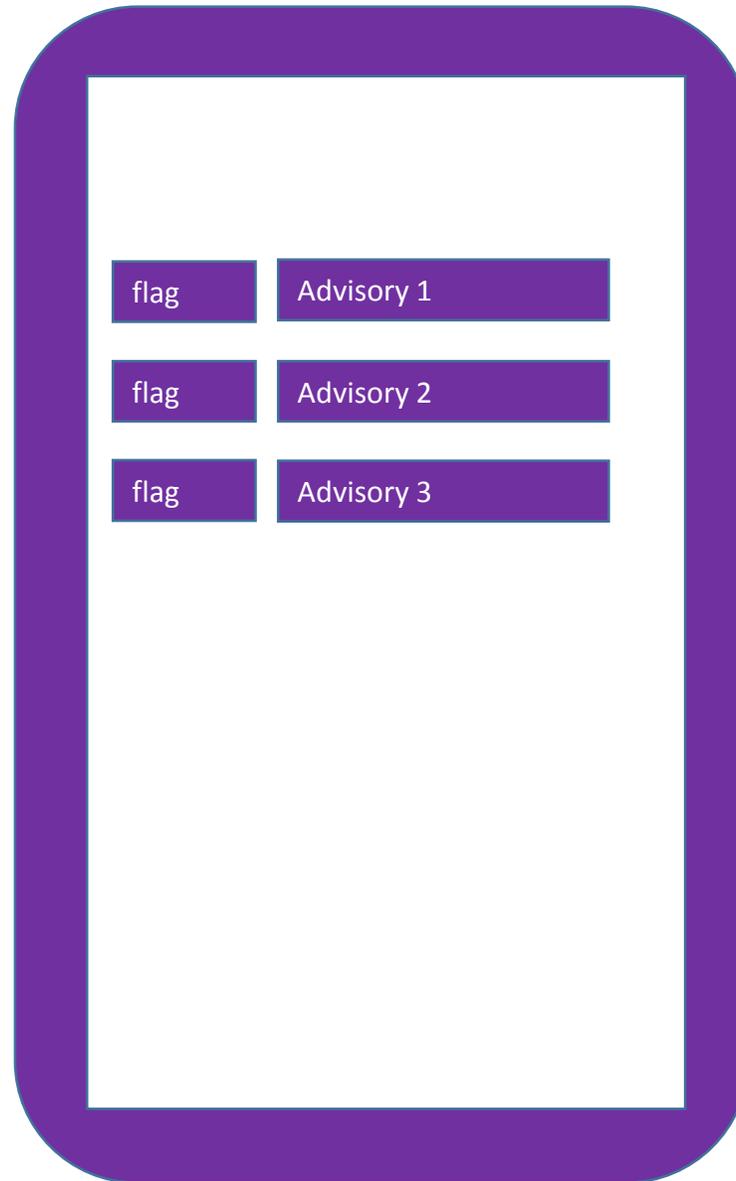

More details on assistance needed

Location

### NOTES

- Name and family name (and potentially contact information) can be asked here if the app does not require previous registration.
- The list of “reasons for communication” includes a variety of situations of distress (major crisis – disaster or conflict, economic hardship, violence, kidnapping)
- The list of “assistance needed” refers to preset services that consular posts may be able to provide (e.g. search and rescue, evacuation, financial assistance) in a list for easy access. More details can be provided by typing a message in the box below.
- Location has an option “send current location” through the phone’s GPS coordinates.
- Communication should be shareable through phone and data networks

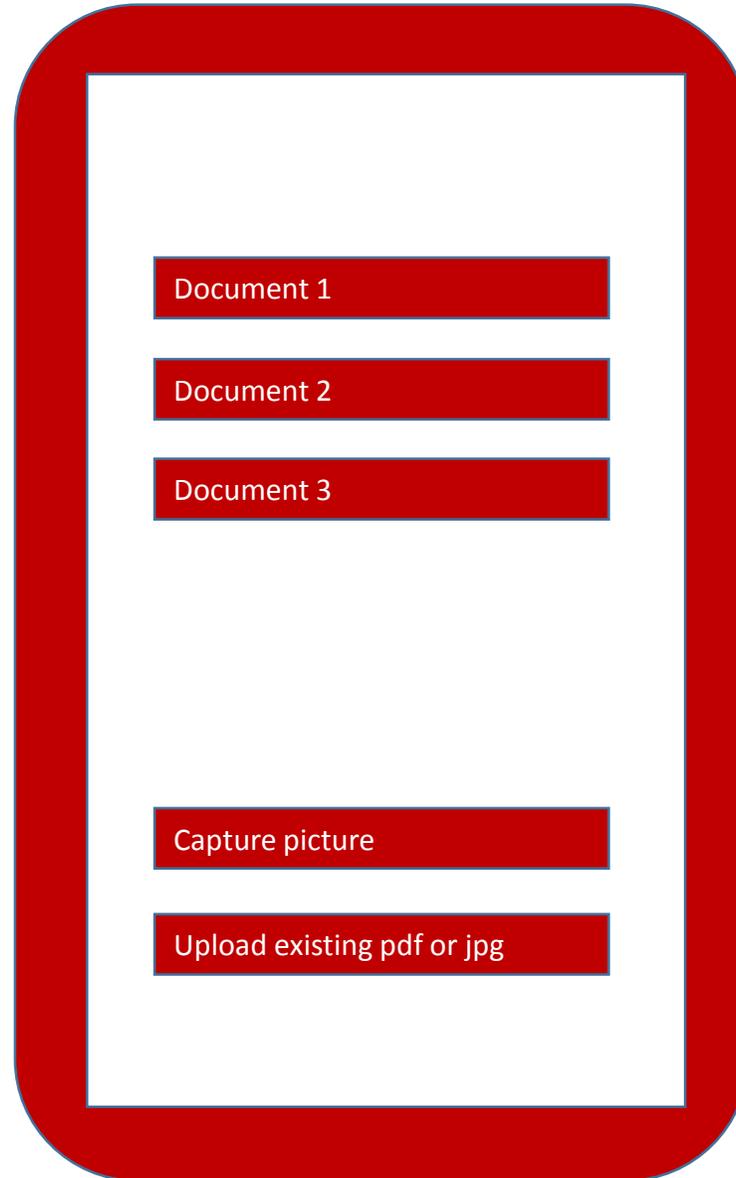

## Current advisories

### NOTES

- The page lists emergency advisories that have been posted through the notification system and have not been deactivated yet.
- The list should clearly show what countries they have been activated for.
- Whenever new notifications are posted, they appear here

## Store your document

### NOTES

- Includes a list of materials already uploaded and two options to store digital copies on the phone/cloud.
- Secure storage for these materials is critical.
